

# “MicroRay”

## Supplemental Safety Device

Rocky Mountain Elevator Products IR MicroRay is designed to monitor the open space between the hoistway door and the gate of the elevator cab.

### Protect Your Company

Recent child injuries have prompted our industry to take action. Safety codes are already changing in some areas affecting new installations. However, there are already thousands of home elevators installed that represent an ongoing hazard. This product allows you to reduce your liability.

- Easy to install (snaps into a 2” hole)
- Retrofit into any system
- Low voltage 12/24v relays
- Virtually invisible and takes up no space.

**Introductory Price  
\$59.95/floor+S&H**

**Do not let this happen to your company!**
